

Light.
Flexible.
Powerful.

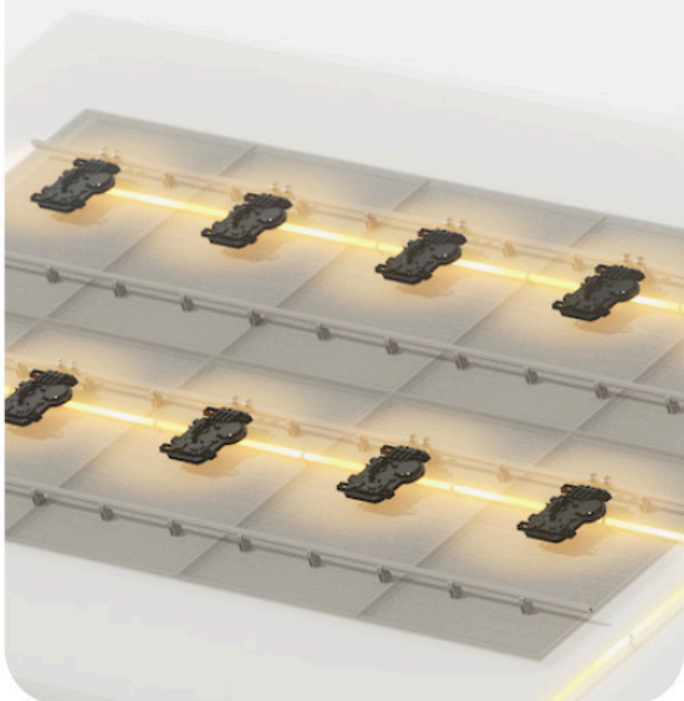

Introducing Enphase IQ

CDL
ELECTRIC
group of companies

“Do it once and do it right. I wanted a complete home energy system that will adapt with technology over 25 years. Enphase was the obvious choice.”

-Ralph Alphonso

Enphase microinverters are placed under each solar panel and work independently, so even if one stops, the power keeps flowing.

Enphase produces more energy.

Enphase is like a personal tutor for each of your solar panels. Each Enphase micro-inverter gets the best out of each panel and ensures your overall system's peak performance. This means over time an Enphase system will always outperform a string/conventional solar system. This translates into real savings.

Enphase is perfect for your home.

Every part of the Enphase Home Energy Solution is designed to have minimal impact on your home. Wiring and equipment are out of sight, and our low voltage design boosts safety.

Enphase is more reliable.

Enphase micro-inverters are used in over 100 countries – from across the United States to India, Australia, and even Antarctica. This means that they operate in very cold and also scorching and humid climates without fail, thanks to very rigorous 1,000,000 power-on hours of testing before any new generation of micro-inverters gets released.

Enphase is smarter monitoring.

Through Enphase MyEnlighten, you can view how your system is doing and make decisions about using your electricity more efficiently from your mobile device or tablet. Get the My Enlighten app at the App Store or Google Play Store.

YOUR LOCAL EXPERTS IN SOLAR ENERGY

WHY WE ARE DIFFERENT

At CDL Group of Companies, we always provide top-tier service at a cost-effective rate, and ensure our customers get the best solution to solve their unique problems.

EXPERT SYSTEM DESIGN

At CDL Group of Companies, we hold ourselves to the highest standard, ensuring every system performs exactly how it is designed. Every system we create is a unique and custom design tailored to your energy needs.

CERTIFIED INSTALLATION

When it comes to solar energy, why trust anyone other than certified expert in electrical work? At CDL Group of Companies, we employ the best master electricians certified in solar energy installation.

SYSTEM MONITORING

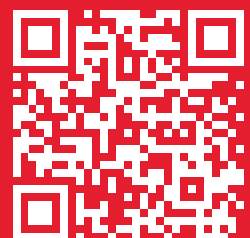

Ensure your system is always working properly with 24/7 monitoring. With an internet connection, you can receive monthly reports, system notifications, and even updates.

TOP-NOTCH EQUIPMENT

CDL Group of Companies only provides solar equipment that is proven to last. We want our customers to trust in their solar investment that is why we only install top-notch technology.

COMMON SOLAR ENERGY MYTHS

At CDL Group of Companies we know that moving to solar is a big decision. We also know there are many myths when transitioning to solar energy and we want to educate you on some misinformation.

I HAVE TO PRODUCE 100% OF MY ELECTRICITY TO SAVE MONEY

Many people are misled to think their system must produce 100% of their annual electricity usage to eliminate their entire bill. CDL Group of Companies utilizes micro-inverter technology that is modular by design, this allows for easy expansion & flexibility. This allows our customers to reap the benefits of solar energy with systems ranging from 50% - 100% energy offset.

I WILL NEED A BATTERY TO USE ALL MY SOLAR ENERGY PRODUCED

While battery systems for backup power are becoming more popular across the US, this does not mean you will need battery backup. Most utility companies now offer net metering, ensuring you get to use every kilowatt-hour produced, even without a battery system. With CDL Group of Companies, every system we design is optimized to ensure that you consume everything produced by your system.

I WILL "SELL" ELECTRICITY BACK TO THE GRID AND MAKE MONEY

The idea of "selling" excess energy to make money is misleading and not of much benefit. Many net metering agreements do allow for monetary credits for excess generation; however, these credits are not at retail rates and are only credits to your account which cannot be paid out. The true benefits of energy independence come from a system designed in which "production = consumption."
